Environmental Product Declaration

In accordance with ISO 14025 and EN 15804:2012+A2:2019/AC:2021 for:
Multiple Products, based on a representative product.

HYMAX Grip Products

HYMAX Grip, HYMAX Grip reducer, HYMAX Grip Large, HYMAX Grip Flange adaptor, HYMAX Grip end cap, HYMAX Grip Swiveljoint and HYMAX Grip Kit end ring.
Art.nr included in study can be found in p. 12

Accountabilities for PCR, LCA and independent, third-party verification
Product Category Rules (PCR)
CEN standard EN 15804 serves as the Core Product Category Rules (PCR)
Product Category Rules (PCR): *PCR 2019:14 Construction products (EN 15804:A2) (1.3.4)*
PCR review was conducted by: The Technical Committee of the International EPD System. See www.environdec.com for a list of members. Review chair: Claudia A. Peña, University of Concepción, Chile. The review panel may be contacted via the Secretariat www.environdec.com/contact
Life Cycle Assessment (LCA)
LCA accountability: *Tyréns Sverige AB*
Third-party verification
Independent third-party verification of the declaration and data, according to ISO 14025:2006, via: ☒ EPD verification by individual verifier Third-party verifier: *Viktor Hakkarainen, CHM Analytics* Approved by: The International EPD® System
Procedure for follow-up of data during EPD validity involves third party verifier: ☐ Yes ☒ No

The EPD owner has the sole ownership, liability, and responsibility for the EPD.

EPDs within the same product category but registered in different EPD programs, or not compliant with EN 15804, may not be comparable. For two EPDs to be comparable, they must be based on the same PCR (including the same version number) or be based on fully-aligned PCRs or versions of PCRs; cover products with identical functions, technical performances and use (e.g. identical declared/functional units); have equivalent system boundaries and descriptions of data; apply equivalent data quality requirements, methods of data collection, and allocation methods; apply identical cut-off rules and impact assessment methods (including the same version of characterization factors); have equivalent content declarations; and be valid at the time of comparison. For further information about comparability, see EN 15804 and ISO 14025.

Company information

Owner of the EPD: IBECO Ingenjörsfirma F. Berglund & Co Aktiebolag

Contact:
Pethra Nordlund, IBECO
Tel. +46 (0)10 206 91 00
E-mail pethra.nordlund@ibeco.se

Description of the organisation:
IBECO – your comprehensive supplier within civil & drainage, plumbing and water management. Well-functioning water and sewage systems require special products of the highest quality. Our wide product portfolio spans from the smallest pipe diameter, valves, pumps, butt welds to the largest stormwater pipes. Our products are often shipped the same day from our own warehouses, which are well distributed throughout Sweden.

IBECO is a distributer within civil & drainage, plumbing and water management. With more than 50 years of experience in our field, we have built up a solid network in all areas. We represent manufacturers within and outside Europe. Their combined range makes us a partner with both breadth and depth.

Name and location of production site(s):
Godsvägen 23, 784 72 Borlänge Sweden

Product information

Product names: HYMAX Grip, HYMAX Grip end cap, HYMAX Grip reducer, HYMAX Grip Flange adaptor, HYMAX Grip Swiveljoint, HYMAX Grip Large and HYMAX Grip Spare part.

Product description:
HYMAX Grip (DN 40-300) and HYMAX Grip Large (DN 350-400) reliably joins and restrains a wide range of piping types and diameters. Its patented design allows the joining of pipes of the same or different materials and same diameters.

HYMAX Grip Flange adaptor (DN 80-300) connect and restrain any flanged device, such as valves, pumps and other devices, with a variety of pipe circumferences and materials.

HYMAX Grip reducer (DN 40-300) restrains pipes of differing diameters, with unmatched performance.

HYMAX Grip end cap (DN 40-300) caps a wide range of piping types and diameters.

HYMAX Grip Swiveljoint (DN 100) can connect and restrain two pipes at any angle from 0° to 90°, providing an efficient solution for field situations where an irregular angle between pipes exist.

HYMAX Grip Kit end ring (DN 50-300) is It's a spare part consisting of a gland, seal, bolt, and gripping teeth per side.

UN CPC code: 41293
Geographical scope:

The EPD is representative for the Swedish market.
Module A1 and A2 are Global
Module A3 production is Israel and Sweden
Module A4 are from Israel to Sweden
Module C and D scenarios are for Sweden

LCA information

Functional unit / declared unit: 1 kg pipe fitting

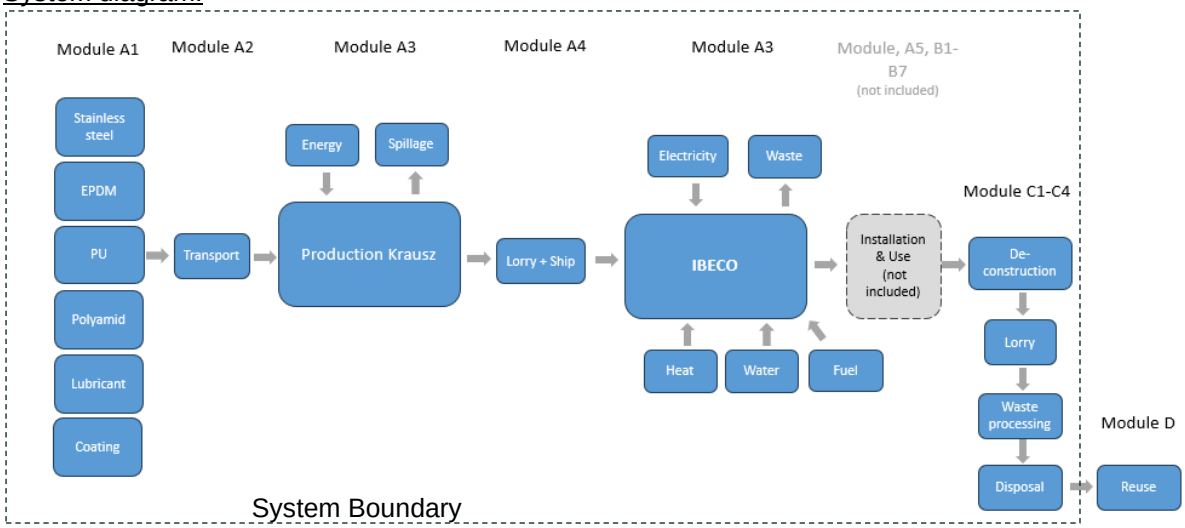

Reference service life: Not declared

Time representativeness: The LCA is based on production data from 2022 but is deemed to be representative of an average year of production.

Database(s) and LCA software used: The LCA software is SimaPro Flow and the database is Ecoinvent 3.9.1. When modelling in Simapro, Ecoinvent data (updated December 2022) has been used for generic data.

Description of system boundaries:
Cradle to gate (A1-A3), transport (A4), end of life (C1–C4) and benefits beyond system boundary (D) (A1–A3 + A4 + C + D)

System diagram:

Production
Materials in the product:
- Stainless steel
- EPDM
- Epoxy Coating
- Polyuretan
- Polyamid
- Lubricant

All raw materials are processed at Krausz factory in Israel were the product is produced. The product is then delivered to IBECO's site in Borlänge where it is stored before it's going to the costumer.

The infrastructure or capital goods used in the product system for underlying processes are included, as infrastructure or capital goods can NOT be excluded in SimaPro FLOW. Therefore results of the impact category abiotic depletion of minerals and metals, may be highly uncertain in LCAs that include capital goods/infrastructure in generic datasets, in case infrastructure/capital goods contribute greatly to the total results. This is because the LCI data of infrastructure/capital goods used to quantify these indicators in currently available generic datasets sometimes lack temporal, technological and geographical representativeness. Caution should be exercised when using the results of these indicators for decision-making purposes.

More information:
LCA practitioner: Moa Mellberg, Marcus Öhlén and Anna Pantze at Tyréns Sverige AB

The factory processes are allocated to the products using mass allocation. In this study, a cut-off criteria of 1% of the total energy use and 1% of the total material consumption is applied.

EN 15804 reference package based on EF 3.1 has been used

Electricity data
IBECO's site in Borlänge purchases electricity from renewables, covered by guarantees of origin from Borlänge energy. The energy mix purchased are 59.4% Hydro power, 37.4% bioenergy and 3,2% wind power. Infrastructure and net losses for high and medium net are included together with transformation losses when going from high voltage to medium voltage. Climate impact for the green energy mix are 0,058 kg CO_2eq. per kWh (GWP-GHG). 22 % energy at Krausz production site comes from solar power and 78% comes from the grid. Grid mix is used due to neglieble presence of renewables in the grid mix. The Climate impact for the energy mix between solar power and the purchased grid electricity of Krausz is 0.62 kg CO_2eq. per kWh (GWP-GHG).

Estimates and assumptions
• The excavation of the worn-out pipes and fittings is allocated to the installation of the new pipe and fittings that replace it, C1.
• 95% of the steel is assumed to be recycled, C3
• 5% of the steel is assumed to go to landfill, C4
• Other materials is assumed to be incinerated, C3
• The recycled steel is assumed to replace primary steel, D
• Truck transports within Europe is assumed to have class EURO 5 and within Sweden EURO 6.

Background data
The data quality of the background data is considered good. The assessment considers all available data from the production process, including all raw materials and auxiliary materials used as well as the energy consumption in relation to available Ecoinvent 3.9.1 datasets .

Data quality
When modeling in Simapro, Ecoinvent data (updated December 2022) has been used for generic data. The database is considered to be of high quality. Approximately 7% specific data in this EPD. Data is gathered from the actual manufacturing plant with product-specific materials, specific amounts, specific energy mix, specific transportation distances and transportation type. Data for spillage is generic.

The fitting is available in several dimensions, the quantity used in this study is per kg of pipe and is the middle dimension. The distribution of the constituent materials per kg of pipe is relatively similar for all dimensions. The difference in climate impact (GWP-GHG) between representative product (HYMAX Grip DN150) and other products are < 10%

Modules declared, geographical scope, share of specific data (in GWP-GHG results) and data variation (in GWP-GHG results):
