- (2) All readings are Peak unless otherwise stated QP in column of 『Note』 . Peak denotes that the Peak reading compliance with the QP Limits and then QP Mode measurement didn't perform.
- (3) Measuring frequency range from 30MHz to 1GHz.
- (4) If the peak scan value lower limit more than 20dB, then this signal data does not show in table.

## 3.4.2 LIMITS OF MAGNETIC EMISSION MEASUREMENT

Frequency Range	Limits for loop diameter dB(A) <sup>(1)</sup>
	2m
9KHz-70KHz	88
70KHz-150KHz	88-58
150KHz-3.0MHz	58-22

### 3.4.3 LARGE LOOP ANTENNA SETUP DIAGRAM

#### 3.4.4 OPERATING CONDITIONS OF THE EUT

The exercise program used during conducted emission measurement was designed to exercise the EUT in a manner similar to a typical use. The exercise sequence is listed as below:

1. Setup the EUT and simulators as shown on 3.3.
2. Turn on the power of all equipments.
3. Start test.

#### 3.4.5 MAGNETIC EMISSION DATA

The quasi-peak limits of the magnetic component of the radiated electromagnetic disturbance field strength in the frequency range **9kHz to 30MHz** measured as a current in 2m, loop antennas around the lighting equipment.

The measurement range of radiated emission, which is from **9kHz to 30MHz**, was investigated. All readings are quasi-peak values with a proper resolution Bandwidth. The initial step in collecting radiated emission data is a spectrum analyzer peak scans of the measurement range for all the test modes and then use test receiver for final measurement. Then the worst modes were reported the following data pages.

According to **EN61547:2009** standard, the general performance criteria as following:

<b>Criterion A</b>	During the test no change of the luminous intensity shall be observed and the regulating control, if any shall operate during the test as intended.
<b>Criterion B</b>	During the test the luminous intensity may change to any value. After the test the luminous intensity shall be restored to its initial value within 1 min. Regulating controls need not function during the test, but after the test the mode of the control shall be the same as before the test provided that during the test no mode changing commands were given.
