

MONTERINGSANVISNING TERMOTRE

VIKTIG Å TA STILLING TIL

- størrelse på terrassen
- form på terrassen

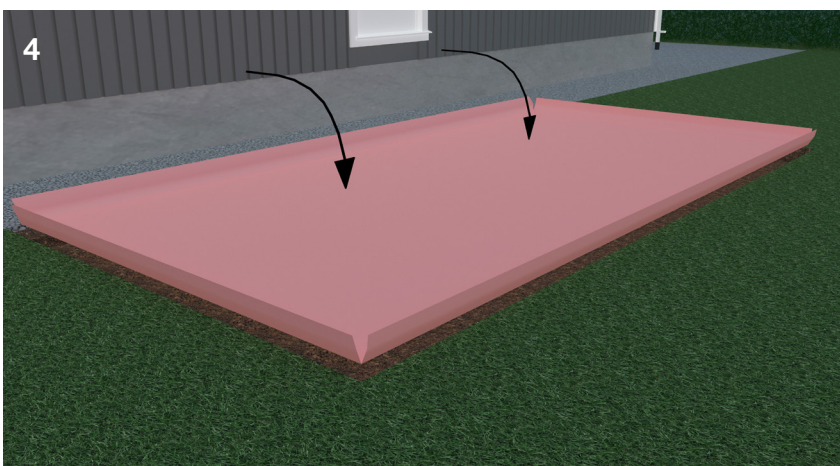

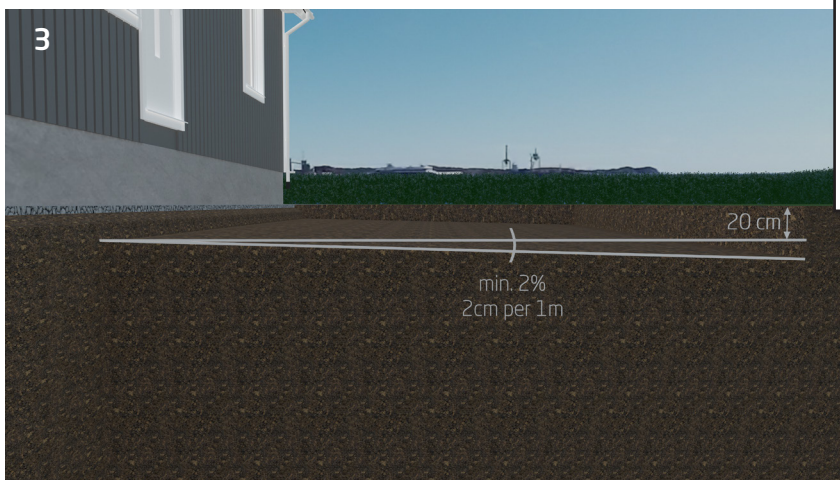

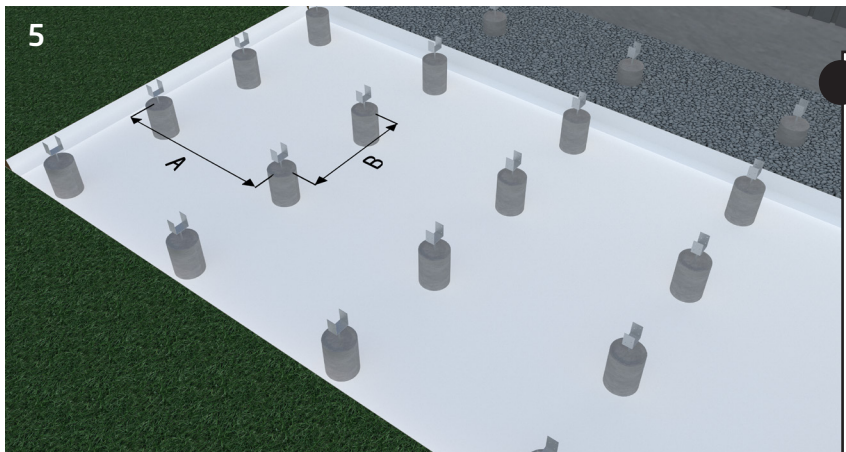

Videre er det også viktig å tenke på om man skal ha en terrasse som går rett ut fra terrassedøren eller ett trinn ned. Vi anbefaler ett trinn ned da det gjør det enklere å også få opp døren på vinterstid.

FORBEREDELSE

Før man starter jobben med å bygge selve terrassen er viktig å starte med å gjøre terrenget klart for fundamentering før man starter selve byggingen av terrassen. Det er viktig å bruke tid på grunnarbeidet for å få en stødig og stabil terrasse.

Tips: bruk en fiberduk som underlag for å hindre irriterende ugress i å vokse opp.

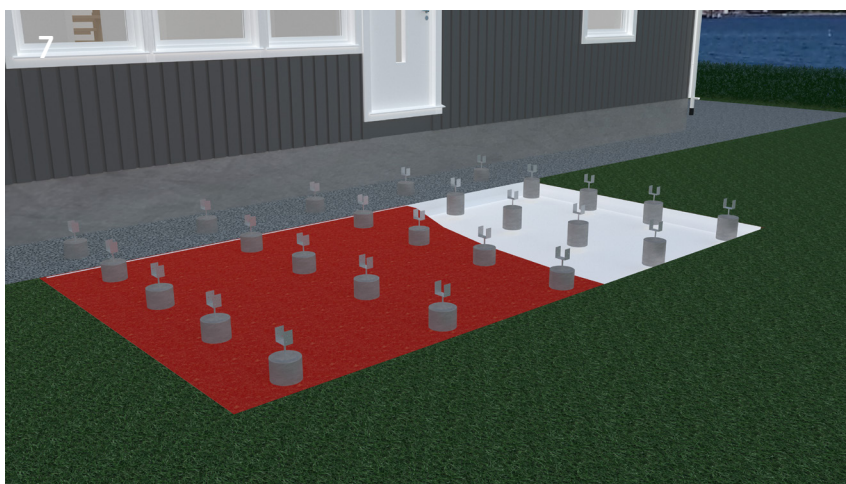

- A.**
maks. 120 cm - 140 bredde
- B.**
maks. 80 cm - 92 bredde

Det er viktig å være nøye med avstand og plassering mellom fundamentene, og pass på at høyden på fundamentene har tilsvarende høyde med fall utover på minimum 2%

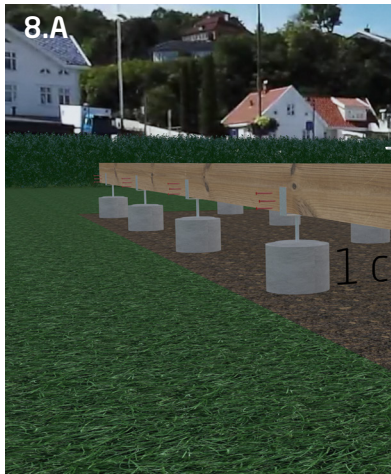

FORBEREDELSE

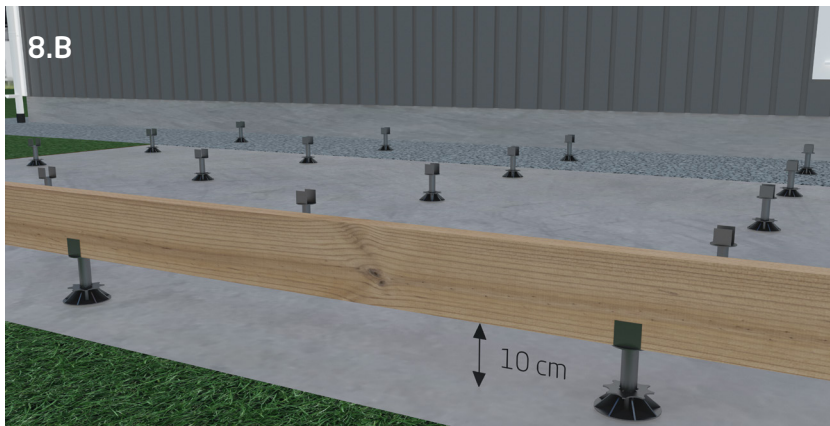

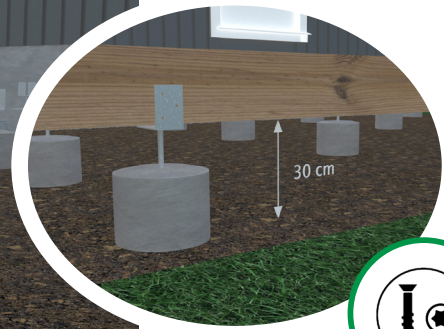

Maksimal avstand på fundamentet er likt som på bilde nr 5.

Bjelker 2 stk 48x198 mm.

✓ ALTERNATIV A

✓ ALTERNATIV B

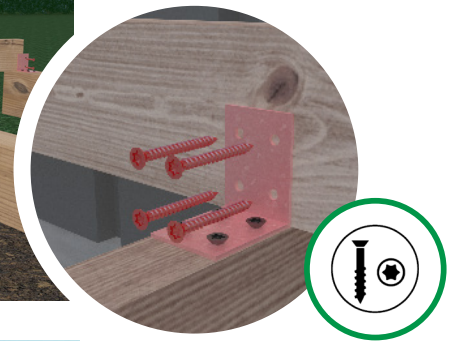

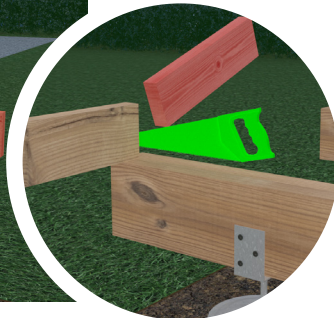

✓ ALTERNATIV C

Asfaltlag for å unngå at fuktigheten stiger fra bakken og opp til treverket.

Bjelkelag: 48x148 mm

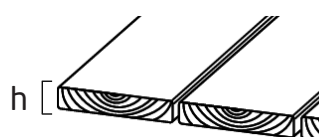

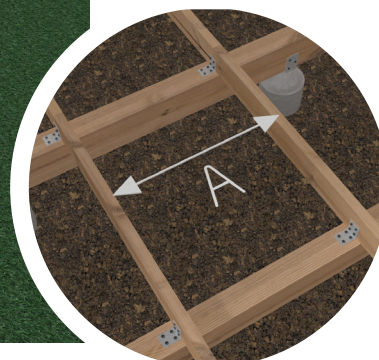

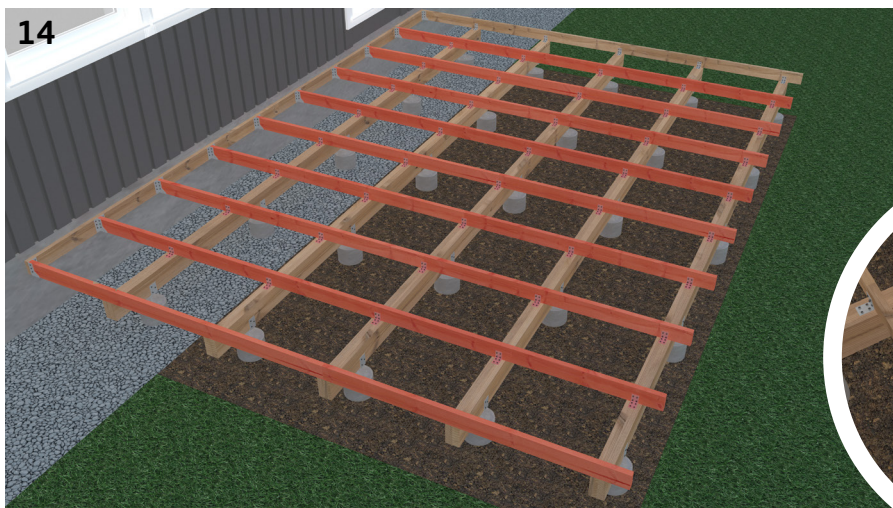

Fest bjelkene til dragerne med beslag som for eksempel vinkelbeslag eller direkte spikre/skru direkte i dragerne.

Viktig: fest bjelkene godt for å sikre stabiliteten sideveis. Bruk gjerne et kantbord for å få ekstra god støtte til bjelkene. Vi anbefaler A2 kvalitet på festemidlene.

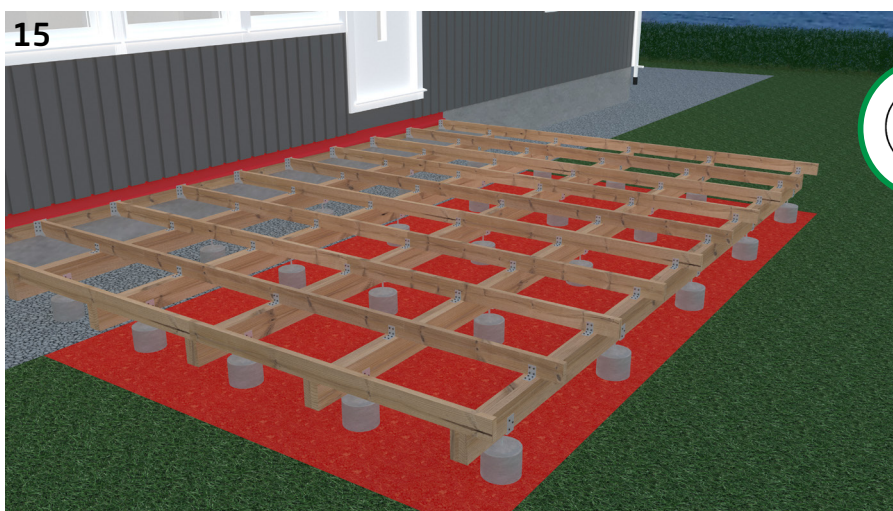

14

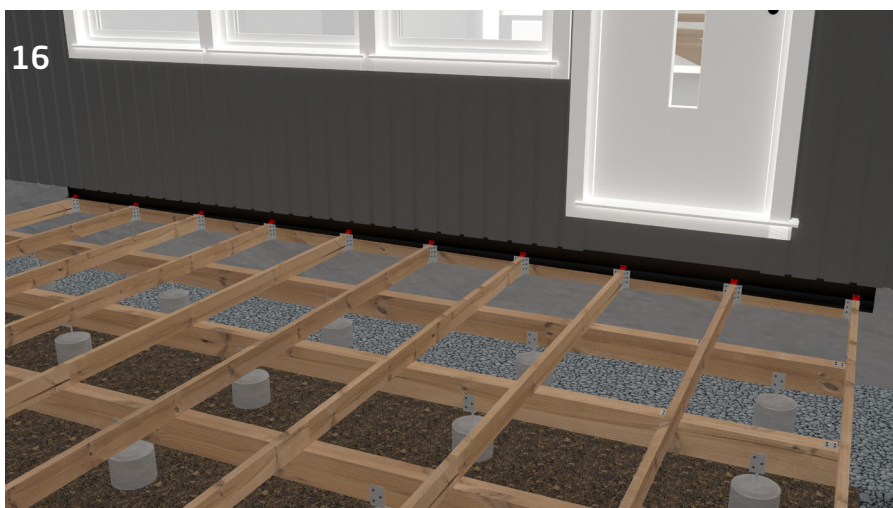

Avstand mellom bjelker skal være **maks 600 mm**

	h= 26 mm	h=40 mm
A	maks 600 mm	maks 600 mm

Valgfritt om man ikke skal montere rekkverk

Valgfritt om man ikke skal montere rekkverk

x 2

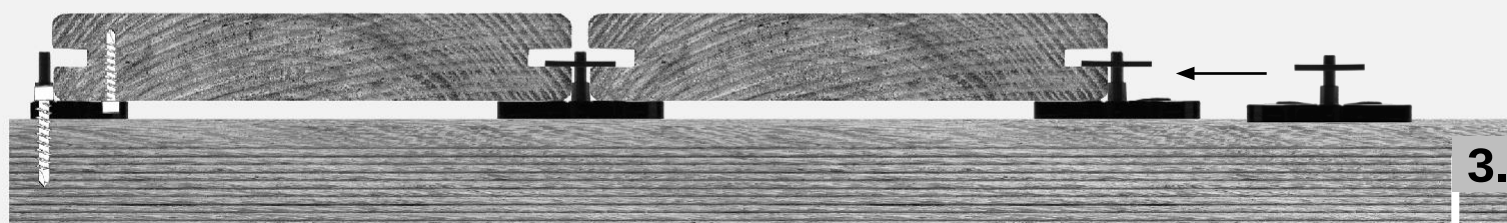

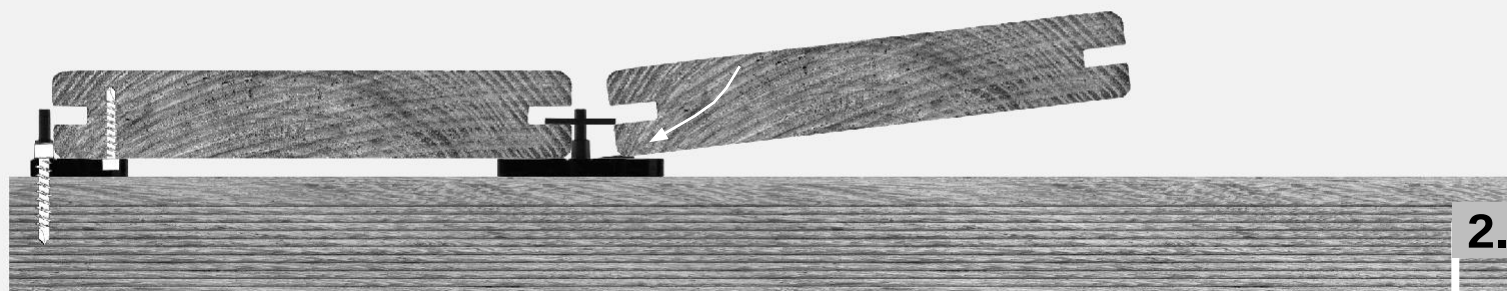

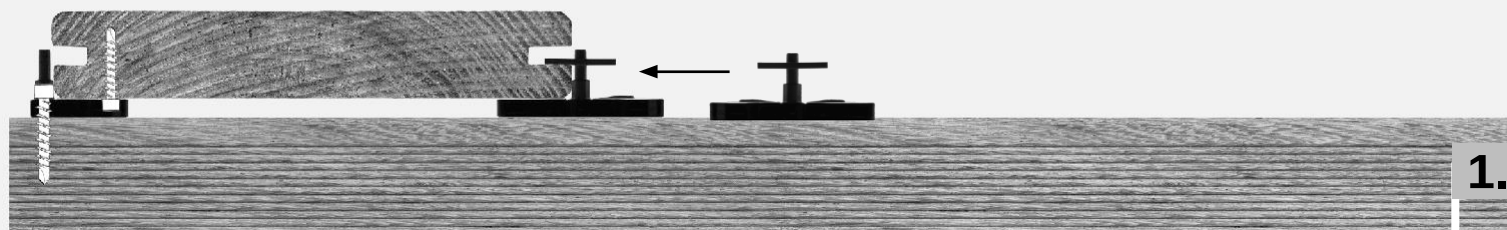

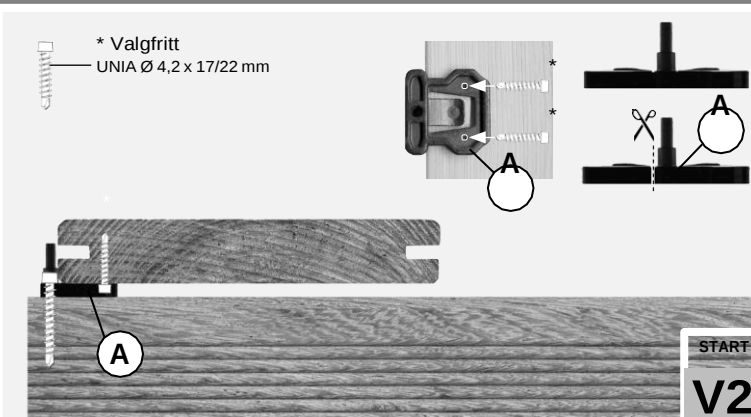

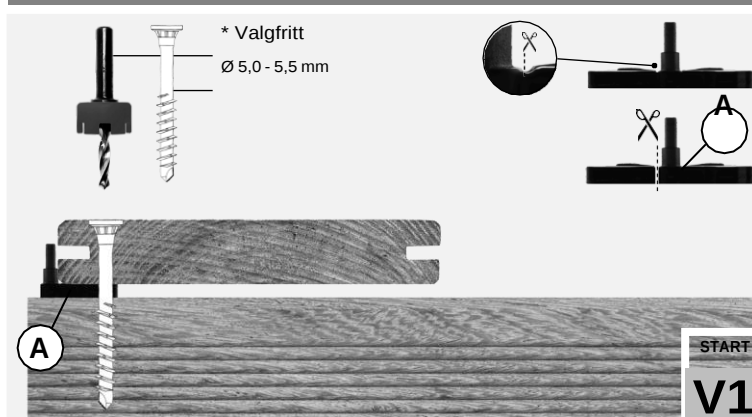

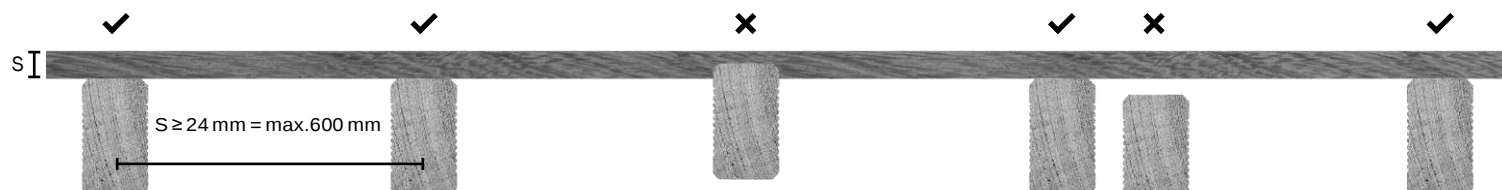

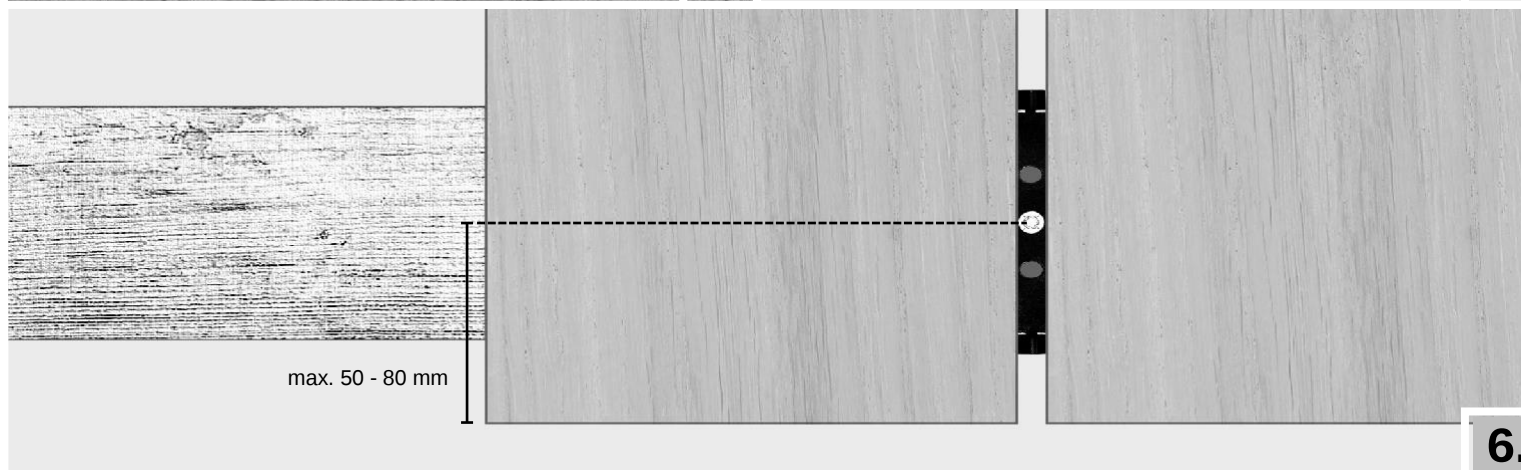

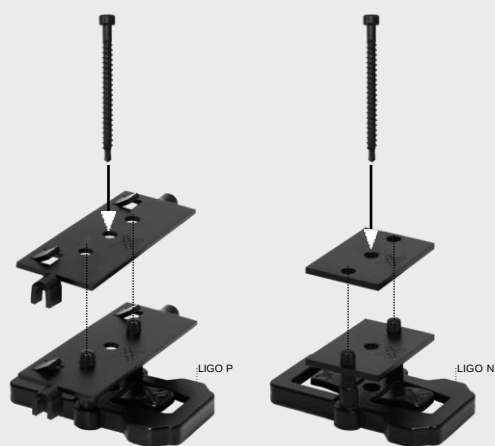

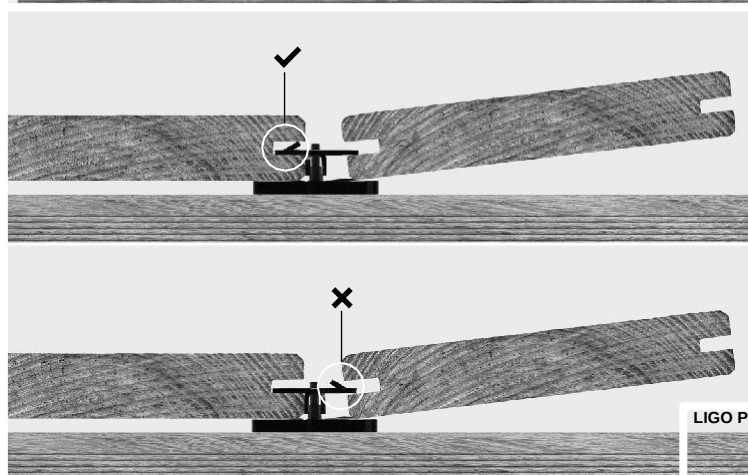

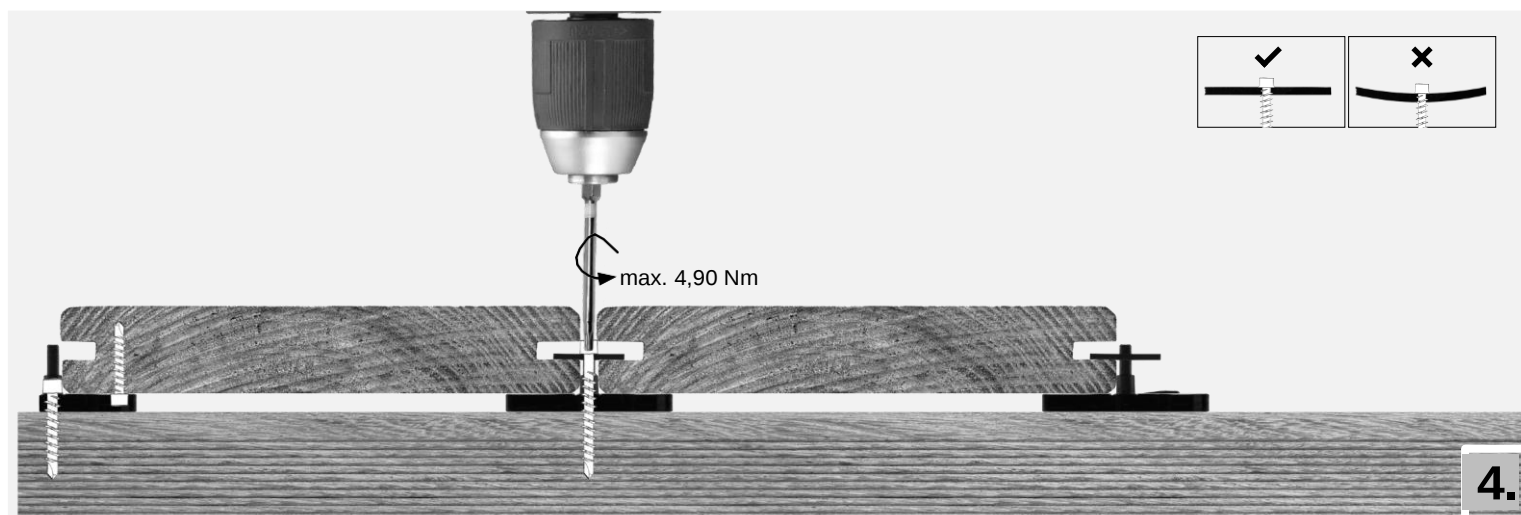

Krav til et rekkverk i.h.t TEK 17§12-11

Hvis terrassen er over en halv meter fra bakkenivå er det krav til rekkverk.

I vårt eksempel er terrassen under en halv meter fra bakkenivå og behøver da ikke
