General Part

Technical Assessment Body issuing the
European Technical Assessment:

Deutsches Institut für Bautechnik

Trade name of the construction product

fischer nail anchor FNA II

Product family
to which the construction product belongs

Load controlled expansion anchor for multiple use for non-
structural applications in concrete

Manufacturer

fischerwerke GmbH & Co. KG
Klaus-Fischer-Straße 1
72178 Waldachtal
DEUTSCHLAND

Manufacturing plant

fischerwerke

This European Technical Assessment
contains

10 pages including 3 annexes

This European Technical Assessment is
issued in accordance with Regulation (EU)
No 305/2011, on the basis of

Guideline for European technical approval of "Metal
anchors for use in concrete", ETAG 001 Part 6: "Anchors
for multiple use for non-structural applications", January
2011,
used as European Assessment Document (EAD)
according to Article 66 Paragraph 3 of Regulation (EU)
No 305/2011.

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Specific Part

1 Technical description of the product

The fischer nail anchor FNA II is an anchor made of galvanised steel, stainless steel (marking "A4") or high corrosion resistant steel (marking "C") which is pushed into a drilled hole and expanded by loading.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

The essential characteristics regarding Mechanical resistance and stability are included under the Basic Works Requirement Safety in use.

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorage satisfy requirements for Class A1
Resistance to fire	See Annex C 2

3.3 Safety in use (BWR 4)

Essential characteristic	Performance
Characteristic resistance for all load directions	See Annex C 1

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with guideline for European technical approval ETAG 001, April 2013 used as European Assessment Document (EAD) according to Article 66 Paragraph 3 of Regulation (EU) No 305/2011 the applicable European legal act is: [97/161/EC].

The system to be applied is: 2+

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable EAD

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.

Issued in Berlin on 28 October 2016 by Deutsches Institut für Bautechnik

**Only for multiple use for non-structural applications according to
ETAG 001 Part 6 Annex 1**

Design types:

Nail head		FNA II 6x25/.. FNA II 6x30/..
Nail head RB		FNA II 6x25/.. RB FNA II 6x30/.. RB
Threaded bolt with ISO standard metric thread M6		FNA II 6x25 M6/.. FNA II 6x30 M6/..
Threaded bolt with ISO standard metric thread M8		FNA II 6x25 M8/.. FNA II 6x30 M8/..
FNA II OE with eye		FNA II 6x25 OE FNA II 6x30 OE

Intended use:

Additional marking only galvanised steel for $h_{ef} = 25$ mm (centring, bar or points)

fischer nail anchor FNA II	Annex A 1
Product description Product and intended use	

Marking:

Nail head

Marking at **X**: "O" for $h_{ef} = 25$ mm
and "I" for $h_{ef} = 30$ mm;

Marking at **Y**: t_{fix}

Marking at **Z**: "A4" or "C" (stainless steel)

Expansion sleeve (or bolt)

e.g.:

For stainless steel additional marking "A4" or "C"

Marking-Codes for Y:

	A	Q	T	N	P	B	L	H	U
t_{fix}	5	10	15	20	25	30	35	40	45
	D	V	S	W	X	E	M	Z	K
t_{fix}	50	55	60	65	70	75	80	85	90
	(A)	F	(B)	(D)	(E)	G	J		
t_{fix}	95	100	105	110	115	120	125		

At $t_{fix} > 125$ mm the corresponding figure is marked.

Shaft (threaded bolt)

Marking e.g.: 6/10
thread size/thickness of the fixture

Marking e.g.: 8/10
thread size /thickness of the fixture
Exception: 8/5 no marking

Product description
Marking and materials

Annex A 2

Specifications of intended use

Anchorage subject to:

- Static and quasi-static loads: All types and all embedment depths
- Fasteners are only to be used for multiple use for non-structural applications, according to ETAG 001 Part 6, Edition January 2011
- Fire exposure: only for concrete C20/25 to C50/60

Base materials:

- Reinforced and unreinforced normal weight concrete according to EN 206-1: 2000
- Strength classes C12/15 to C50/60 according to EN 206-1: 2000
- Uncracked and cracked concrete: All types and all embedment depths

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (gvz, A4, C) with $h_{ef} \geq 25$ mm
- Structures subject to permanently damp internal condition, if no other particular aggressive conditions exist (A4, C) with $h_{ef} \geq 25$ mm
- Structures subject to external atmospheric exposure including industrial and marine environment, if no particular aggressive conditions exist (A4, C) with $h_{ef} \geq 30$ mm
- Structures subject to external atmospheric exposure and to permanently damp internal condition, if other particular aggressive conditions exist (C) with $h_{ef} \geq 30$ mm

Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used.)

Design:

- Anchorages have to be designed under the responsibility of an engineer experienced in anchorages and concrete work
- Verifiable calculation notes and drawings have to be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.)
- Anchorages under static or quasi-static actions have to be designed in accordance with:
 - ETAG 001, Annex C, design method C, Edition August 2010 or
 - CEN/TS 1992-4: 2009, design method C
- Anchorages under fire exposure have to be designed in accordance with:
 - EOTA Technical Report TR 020, Edition May 2004
 - CEN/TS 1992-4: 2009
 - It must be ensured that local spalling of the concrete cover does not occur

Installation:

- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- Create drill hole with hammer drill and clean the hole
- Anchor installation such that the effective anchorage depth is complied with. This compliance is ensured, if the admissible thickness of the fixture is kept. For the anchor type FNA II $6 \times h_{ef}$ OE the loop has to sit direct at the concrete surface.
- In case of aborted hole: New hole must be drilled at a minimum distance of twice the depth of the aborted hole or closer, if the hole is filled with a high strength mortar and only if the hole is not in the direction of the oblique tensile or shear load
