7. EXPOSURE CONTROLS/PERSONAL PROTECTION

7.1. Exposure limit values

Materials are integrated into the product and should not lead to any exposure under normal handling conditions.

CHEMICAL NAME	CALCIUM CARBON- ATE	CONTENT %
WEL-TWA: 4mg/m ³ (respirable dust), 10mg/m ³ (total inhalable dust)	WEL-STEL: ---	
BMGV: ---		Other information: ---

CHEMICAL NAME	QUARTZ	CONTENT %
WEL-TWA: 0,1 mg/m ³ (silica, respirable, crystalline)	WEL-STEL: ---	
BMGV: ---		Other information: ---

WEL-TWA = Workplace Exposure Limit – Long-term exposure limit (8-hour TWA (= time weighted average) reference period) EH40. AGW = "Arbeitsplatzgrenzwert" (workplace limit value, Germany). WEL-STEL = Workplace Exposure Limit – Shortterm exposure limit (15 minutes reference period). BGMV = Biological monitoring guidance value EH40. BGW = "Biologischer Grenzwert" (biological limit value, Germany) Other information: Sen = Capable of causing occupational asthma. Sk = Can be absorbed through skin. Carc = Capable of causing cancer and/or heritable genetic damage.

** = The exposure limit of this substance is repealed through the TRGS 900 (Germany) of January 2006 with the goal of revision.

7.2. Exposure controls

7.2.1. Occupational exposure controls

Ensure good ventilation. This can be achieved by local suction of general air extraction.

If this is insufficient to maintain the concentration under the WEL or AGW values, suitable breathing protection should be worn.

Applies only if maximum permissible exposure values are listed here.

General hygiene measures for the handling of chemicals are applicable.

Wash hands before breaks and at the end of work.

Keep away from food, drink, and animal feedingstuffs.

Respiratory protection: Normally not necessary.

Hand protection: Normally not necessary.

If applicable: Leather gloves

Eye protection: Normally not necessary.

Skin protection: Protective working garments (e.g. safety shoes EN ISO 20345, long-sleeved protective working garments)

Additional information on hand protection – No tests have been performed.

Selection made for preparations according to the best available knowledge and information on the ingredients. Selection of materials derived from glove manufacturer's indications.

Final selection of glove material must be made taking the breakthrough times, permeation rates and degradation into account.

Selection of a suitable glove depends not only on the material but also on other quality characteristics and varies from manufacturer to manufacturer.

In the case of preparations the resistance of glove materials cannot be calculated in advance so it has to be tested for use. The exact breakthrough time of the glove material can be requested from the protective glove manufacturer and must be observed.
