The Norwegian EPD Foundation

ENVIRONMENTAL PRODUCT DECLARATION

in accordance with ISO 14025, ISO 21930 and EN 15804

Owner of the declaration:	Norgips Norge AS
Program operator:	The Norwegian EPD Foundation
Publisher:	The Norwegian EPD Foundation
Declaration number:	NEPD-2515-1255-EN
Registration number:	NEPD-2515-1255-EN
ECO Platform reference number:	-
Issue date:	05.11.2020
Valid to:	05.11.2025

Norgips Weatherboard 365 type GM-H1

Norgips Norge AS

www.epd-norge.no

General information

Product:
Norgips Weatherboard 365 type GM-H1

Owner of the declaration:
Norgips Norge AS
Contact person: Trond Even Fagerli
Phone: +47 46 95 32 15
e-mail: trond.fagerli @norgips.com

Program operator:
The Norwegian EPD Foundation
Pb. 5250 Majorstuen, 0303 Oslo, Norway
Phone: +47 23 08 80 00
e-mail: post@epd-norge.no

Manufacturer:
Norgips Norge AS
Postboks 655 Strømsø
3003 Drammen

Declaration number:
NEPD-2515-1255-EN

Place of production:
Svelvik, Norway

ECO Platform reference number:

Management system:
NS-EN ISO 14001:2015

This declaration is based on Product Category Rules:
CEN Standard EN 15804 serves as core PCR
NPCR010 v3.0 Building boards (04/2019).

Organisation no:
NO 986034757 MVA

Statement of liability:
The owner of the declaration shall be liable for the underlying information and evidence. EPD Norway shall not be liable with respect to manufacturerinformation, life cycle assessment data and evidences.

Issue date:
05.11.2020

Valid to:
05.11.2025

Declared unit:

Year of study:
2019

Declared unit with option:
1 m2 of installed gypsum board, including waste treatment at end of life.

Comparability:
EPD of construction products may not be comparable if they not comply with EN 15804 and seen in a building context.

Functional unit:

The EPD has been worked out by:
Clara Valente & Lars G. F. Tellnes

Verification:
The CEN Norm EN 15804 serves as the core PCR.
Independent verification of the declaration and data, according to ISO14025:2010

☐ internal ☑ external

Third party verifier:
Ole M. K. Iversen
(Independent verifier approved by EPD Norway)

Approved
Håkon Hauan
Managing Director of EPD-Norway

Product

Product description:
Building board consisting of an impregnated plaster core protected on front- and backside with water repellent fiberglass cloth. The synthetic cloth is firmly connected with the plate's core, and overlapped and glued to each other on the back of the plate. Weatherboards are used for windproofing of exterior walls and roofs. The plate is resistant to UV rays and does not provide a foundation for mildew or other microbial growth. The plates will not decompose or decompose biologically, and can be exposed to weather for up to 12 months before the facade is redone.

Technical data:
The product is in compliance with EN 520

Weight: 7.6 kg/m^2 ± 2 %,
Thickness: 9.5 mm ± 0.5 mm
For more information from the product data sheet, see
www.norgips.no / www.norgips.se

Product specification:
Gypsum board is produced in various width and length, but at the same thickness and it is therefore no variations of the product per square meter.

Market:
Norway and Sweden

Reference service life, product:
60

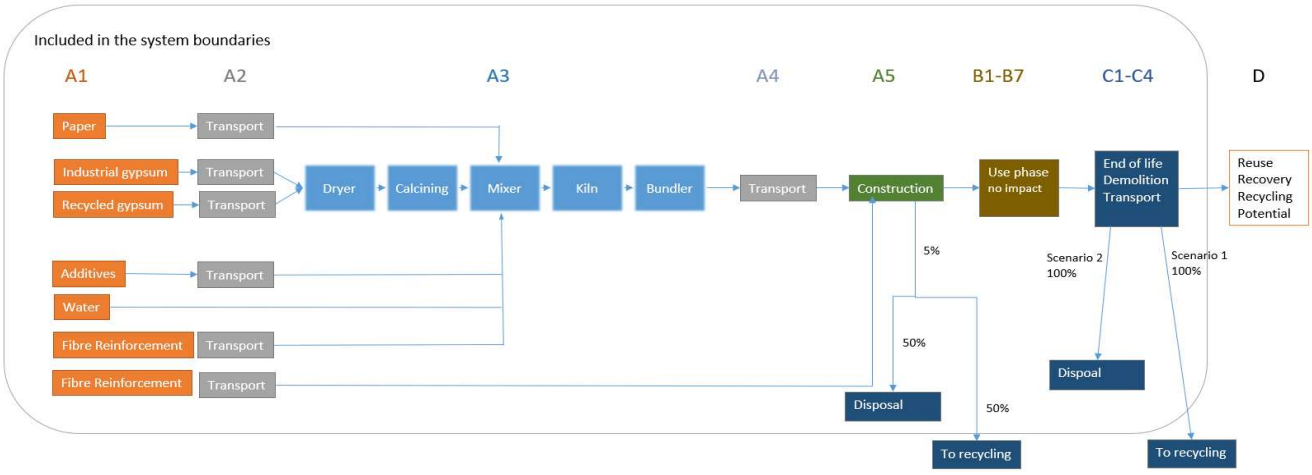
Reference service life, building:
60

Materials	kg	%
Gypsum	6.129	80.67 %
Synthetic fleece	0.200	2.63 %
Glass fibre reinforcement	0.015	0.20 %
Additives	0.225	2.96 %
Water	1.029	13.54 %
Total for product	7.598	100 %
Plastic packaging	0.003	
Wood packaging	0.049	
Wooden pallet	0.009	
Total product + packaging	7.658	

LCA: Calculation rules

Declared unit:
1 m2 of installed gypsum board, including waste treatment at end of life.

System boundary:
Flow chart for the complete life cycle (A1-C4) with system boundaries are shown in the figure below. Modul D is also declared outsitde the life cycle with material and energy substitution from net recovery and is further explained in the scenarios.



Industrial gypsum and recycled gypsum are mixed and dried before the mixture is calcined. The calcined gypsum is transferred to the mixer where water and additives are added. The slurry is distributed to a plasterboard liner where the edges are folded and a new layer of plasterboard liner is glued on to form a sandwich. The board line is continuous transferred along the production line, cut to suitable lengths and dried in a kiln. The dried boards are cut to the correct lengths and stacked in pallets.

Data quality:
The manufacturing data for Norgips was collected in 2019 and represents an average for 2018. Other data are from ecoinvent v3.6, released in 2020, but with some changes to improve representativeness.

Cut-off criteria:
All major raw materials and all the essential energy is included. The production process for raw materials and energy flows that are included with very small amounts (<1%) are not included. This cut-off rule does not apply for hazardous materials and substances.

Allocation:
The allocation is made in accordance with the provisions of EN 15804. Incoming energy and water and waste production in-house is first sub-division and then allocated equally among all products through mass allocation. Effects of primary production of recycled materials allocated to the main product in which the material was used. The recycling process and transportation of the material is allocated to this analysis.

Calculation of biogenic carbon:
Uptake and emissions of biogenic carbon are calculated according to EN 16485:2014. This is based on the modularity principle in EN 15804:2012, where the emissions shall be accounted in the module where it ocurs. Net contributrion of biogenic carbon is calculated for each module on page 8.

LCA: Scenarios and additional technical information

The following information describe the scenarios in the different modules of the EPD.

All products are either first transported to a building mechant or directly to a building site. It is included a scenario for direct transport to building site with a distance of 360 km.

Transport from production place to user (A4)

Type	Capacity utilisation (incl. return) %	Type of vehicle	Distance km	Fuel/Energy consumption	Unit
Truck	55	EURO6	360	0.0227	l/tkm
Truck					

It is assumed 0.0012 MJ of electricity use in assembly and 5 % wastage of the product, in addition to waste management of the packaging. Jointing compound and tape are also added to smooth the surface between boards.

There are no LCA-related environmental impacts during use.

Assembly (A5)

	Unit	Value
Auxiliary - jointing tape	kg	0.0042
Auxiliary - jointing compound	kg	0.33
Water consumption	m^3	0
Electricity consumption	MJ	0.0012
Other energy carriers	MJ	0
Material loss	kg	0.38
Output materials from waste treatment	kg	0.0603
Dust in the air	kg	0

Use (B1)

	Unit	Value
Relevant emissions during use	kg	0

It is assumed that there is no need for maintenance nor repair under a normal scenario.

Maintenance (B2)/Repair (B3)

	Unit	Value
Maintenance cycle*		
Auxiliary	kg	0
Other resources	kg	0
Water consumption	m^3	0
Electricity consumption	kWh	0
Other energy carriers	MJ	0
Material loss	kg	0

It is assumed that there is no need for operational energy nor water under a normal scenario.

Operational energy (B6) and water consumption (B7)

	Unit	Value
Water consumption	m^3	0
Electricity consumption	kWh	0
Other energy carriers	MJ	0
Power output of equipment	kW	0

It is assumed that there is no need for replacement nor refurbishment under a normal scenario.

Replacement (B4)/Refurbishment (B5)

	Unit	Value
Replacement cycle*		
Electricity consumption	kWh	0
Replacement of worn parts	0	0

* Number or RSL (Reference Service Life)

The product is collected as gypsum. The most common treatment is recycling and landfilling. Both scenarios are declared as separate 100 % scenarios.

End of Life (C1, C3, C4)

	Unit	Value
Collected as gypsum waste	kg	7.6
Collected as mixed construction waste	kg	0.0
Reuse	kg	0.0
Recycling - scenario 1	kg	7.6
Energy recovery	kg	0.0
To landfill - scenario 2	kg	7.6

The transport of gypsum waste is assumed to be 50 km for landfilling scenario and 250 km for recycling.

Transport to waste processing (C2)

Type	Capacity utilisation (incl. return) %	Type of vehicle	Distance km	Fuel/Energy consumption	Unit
Scenario 1 - recycling					
Truck		Unspecified	300	0.027	l/tkm
Scenario 2 - landfill					
Truck		Unspecified	50	0.027	l/tkm

The benefits and loads beyond system boundaries are calculated from the net flows shown in the tables below. The exported energy from municipal incineration was calculated from amounts in 2015 and that substiututes Norwegian electricity mix and district heating mix. The recycling output of gypsum is assumed at 90 % of the weight of the product and the raw material substitution is modelled with mined gypsum. The net output flow of gypsym is however negative and will give a net load in module D.

Scenario 1 - Recycling - Benefits and loads beyond the system boundaries (D)

	Unit	Value
Substitution of electric energy	MJ	0.7
Substitution of thermal energy	MJ	5.5
Substitution of raw materials	kg	-0.5
Substitution of fuels	kg	0.0
Substiution of products	kg	0.0

Scenario 2 - Landfilling - Benefits and loads beyond the system boundaries (D)

	Unit	Value
Substitution of electric energy	MJ	0.0
Substitution of thermal energy	MJ	0.0
Substitution of raw materials	kg	-7.5
Substitution of fuels	kg	0.0
Substiution of products	kg	0.0

LCA: Results

The results for global warming of the different modules have a large contribution from uptake and emission of biogenic carbon. The net contribution of biogenic carbon to each modules is shown on page 8.

System boundaries (X=included, MND= module not declared, MNR=module not relevant)

Product stage			Assemby stage		Use stage							End of life stage				Beyond the system boundaries

Additional Norwegian requirements

Greenhous gas emission from the use of electricity in the manufacturing phase
National consumption mix with import on low voltage (production of transmission lines, in addition to direct emissions and losses in grid) are applied electricity for the manufacturing prosess (A3).

Data source	Amount	Unit
Ecoinvent v3.5 (2018)	31.7	CO_2-eqv/kWh

Dangerous substances

- ☑ The product contains no substances given by the REACH Candidate list or the Norwegian priority list
- ☐ The product contains substances given by the REACH Candidate list or the Norwegian priority list that are less than 0,1 % by weight.
- ☐ The product contain dangerous substances, more then 0,1% by weight, given by the REACH Candidate List or the Norwegian Priority list, see table.
- ☐ The product contains no substances given by the REACH Candidate list or the Norwegian priority list. The product is classified as hazardous waste (Avfallsforskiften, Annex III), see table.

Indoor environment
Emissions to indoor air are tested by RISE in 2020 and evaluted according to EN 16516. The summary of the test results are listed below for Norgips Standard 12,5 mm Type A.

TVOC	<10	µg/m^{2}h	
Sum carcinogenic VOCs	<1	µg/m^{2}h	
Sum VOC with LCI	<2	µg/m^{2}h	
Sum VOC without LCI	<2	µg/m^{2}h

Formaldehyde	3	µg/m^{2}h	
Sum SVOC	<2	µg/m^{2}h	
R= Sum Ci/LCIi	0.07		

Carbon footprint
In order to increase the transparency of biogenic carbon contribution to climate impact, the indicator for GWP has been sub-divided into the following:
GWP-IOBC Climate impacts calculated according to the principle of instantanious oxidation
GWP-BC Climate impacts from the net uptake and emission of biogenic carbon from each module.

Climate impacts									
Parameter	**Unit**	**A1-A3**	**A4**	**A5**	**B1-B7**	**C1**
