European Technical Assessment EAD 330232-00-0601 "Mechanical Fasteners for use in concrete", ed. October 2016

Page 2 of European Technical Assessment ETA 18/1064 of 28/01/2019

English translation prepared by IETcc

This European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and should be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission according to article 25 (3) of Regulation (EU) No 305/2011.

#### **SPECIFIC PART**

#### 1. Technical description of the product

The Essve EUS concrete screw is an anchor made of carbon steel. The anchor is made in sizes 7.5, 10.5. 12.5 and 16.5, and is screwed into a predrilled cylindrical drill hole. The special thread of the anchor cuts an internal thread into the member while setting. The anchorage is characterised by mechanical interlock in the special thread.

Product and product description is given in annex A.

# 2. Specification of the intended use in accordance with the applicable European Assessment Document.

The performances given in section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means to choosing the right products in relation to the expected economically reasonable working life of the works.

#### 3. Performance of the product and references to the methods used for its assessment

#### 3.1 Mechanical resistance and stability (BWR 1)

Essential ch	aracteristic						Performance
Essve EUS	performance	for	static	or	quasi	static	See annex C
actions							

#### 3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorages satisfy requirements for class A1
Resistance to fire	See annex D

# 4. Assessment and verification of constancy of performance (hereinafter AVCP) system applied, with reference to its legal base

The applicable European legal act for the system of Assessment and Verification of Constancy of Performances (see annex V of Regulation (EU) No 305/2011) is 96/582/EC.

The system to be applied is 1.

English translation prepared by IETcc

5. Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document.

The technical details necessary for the implementation of the AVCP system are laid down in the quality plan deposited at Instituto de Ciencias de la Construcción Eduardo Torroja.

- Outer diameter
- Length

Essve EUS	
Product description	Annex A2
Identification	

#### **Installed condition**

hef: Effective anchorage depth

h<sub>1</sub>: Depth of drilled hole

h<sub>nom</sub>: Overall anchor embedment depth in the concrete

h<sub>min</sub>: Minimum thickness of concrete member

t<sub>fix</sub>: Thickness of fixture

d<sub>0</sub>: Nominal diameter of drill bit

d<sub>f</sub>: Diameter of clearance hole in fixture

**Table A1: Materials** 

Item	Designation Essve EUS							
1	Anchor Body	Carbon steel wire rod cold forged. Allowed coatings:						

Essve EUS	
Product description	Annex A3
Installed condition	

#### Intended use

#### Anchorages subjected to:

Static or quasi static loads: all sizes and embedment depths.

#### **Base materials:**

- Reinforced and unreinforced concrete according to EN 206-1.
- Strength classes C20/25 to C50/60 according to EN 206-1.
- Cracked and uncracked concrete.

#### **Use conditions (environmental conditions):**

- The anchor shall be used in dry internal conditions.
- The anchor may be used for anchorages with requirements related to resistance to fire.

#### Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete.
- Verifiable calculation rules and drawings are prepared taking into account of the loads to be attached. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.)
- Anchorages under static or quasi-static loads are designed for design Method A in accordance with:
  - EN 1992-4:2018

#### Installation:

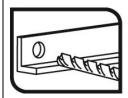

- Hammer drilling only.
- Anchor installation carried out by appropriately qualified personal and under the supervision
  of the person responsible for technical matters of the site.
- In case of aborted hole: new drilling at a minimum distance away of twice the depth of aborted hole or smaller distance if the aborted hole is filled with high strength mortar and if under shear or oblique tension load it is not the direction of the load application.
- After installation further turning of the anchor is not possible. The head of the anchor is supported on the fixture and it is not damaged.

Concrete pry-out failure	EUS 7.5	EUS 10.5	EUS 12.5	EUS 16.5
K factor []	1	1	1	2

EN 1992-4:2018, these values of k factor and the relevant values of NRk,c,fi given in the above tables have to be considered in the design.

#### Concrete edge failure

The characteristic resistance  $V^0_{RK,c,fi}$  in C20/25 to C50/60 concrete is determined by:  $V^0_{RK,c,fi} = 0.25 \times V^0_{RK,c}$  ( $\leq R90$ ) and  $V^0_{RK,c,fi} = 0.20 \times V^0_{RK,c}$  (R120) With  $V^0_{RK,c}$  initial value of the characteristic resistance in cracked concrete C20/25 under normal temperature, according to EN 1992-4:2018.
