1 Generelt

Les monteringsanvisningen grundig før du går i gang med å sette sammen huset!

- La huset være innpakket og oppbevar det på et tørt sted, ikke i direkte kontakt med bakken og godt beskyttet mot vær og vind (fuktighet, solskinn osv.), helt frem til det skal monteres. Huspakken må ikke oppbevares i et oppvarmet rom!
- Når du skal bestemme hvor hagehuset skal stå, må du ta hensyn til at det ikke bør utsettes for ekstreme værforhold (områder med kraftig snøfall eller sterk vind); ellers må du feste det med forsterkning til bakken.

Dette huset er fremstilt av høykvalitets furu og leveres ubehandlet. Dette huset har gjennomgått en grundig inspeksjon. Dersom du likevel skulle ha grunn til reklamasjon, ber vi deg fylle ut kontrollskjema og sende det sammen med kjøpsbeviset og kvitteringen til forhandleren.

OBS: Sørg for å oppbevare all dokumentasjon som følger med huspakken! Husets serienummer er oppført på kontrollskjema. Vi kan kun behandle en reklamasjon dersom du sender husets serienummer til forhandleren!

Garantien dekker ikke:

Garanti

- Særegenhet i treverket som et naturlig materiale
- Deler av huset som er blitt malt (behandlet med trebevaringsmidler)
- Deler av huset som inneholder hele kvister som ikke representerer en fare for husets stabilitet
- Variasjoner i fargetone som er forårsaket av forskjeller i trestrukturen og som ikke har betydning for treverkets levetid
- Deler av huset som sprekker (på grunn av tørking) små sprekker/riss som ikke er gjennomgående og som ikke påvirker husets struktur
- Deler av vridd tre som likevel kan monteres
- Tak- eller gulvplank som på skjulte overflater kan oppvise uhøvlede områder, fargeforskjeller og vankant
- Reklamasjoner fordi huset er blitt montert på ukyndig måte eller fordi huset siger på grunn av ukyndig utført fundament
- Reklamasjoner fordi det er blitt gjort endringer på huset på eget initiativ, som f.eks. formendringer på deler av tre eller dører/vinduer på grunn av ukyndig behandling av treverket; at stormavstivere er festet for stramt, dørkarmer er blitt skrudd inn i veggstokker osv.

Reklamasjonene som dekkes av garantien er begrenset til å omfatte erstatning av manglende/feil materiale. Alle andre krav utelukkes!

Maling og vedlikehold av hagehuset

Tre er et naturlig materiale som vokser og tilpasser seg i forhold til værforholdene. Større eller mindre sprekker, fargeforskjeller og endringer samt ulikheter i treets struktur er ikke feil, men et resultat av treets vekst og en særegenhet i treverket som et naturlig materiale.

Ubehandlet treverk (unntatt bærebjelker i fundamentet) blir grått hvis det blir værende ubehandlet over tid og kan bli blått og begynne å råtne. For å beskytte treverket i hagehuset, må det før montering behandles med grunning.

Alle deler må behandles med grunning (f. eks. Visir) på alle sider (innvendig og utvendig), laftespor, not og fjær, før montering.

- Husk:
- Endeved 3-4 strøk vått i vått.
 - Grunn vinduer og dører på alle sider.
 - Grunn tak/gulvbord på alle sider.

Hvorfor grunning?

Det er ekstra mye endeved i en laftehytte. Hvert eneste laftespor har endeved. Det er endeveden som tar til seg mest fuktighet i treverk. Ved produksjon av en laftehytte blir treverket tørket før det blir produsert. Dette gjør at delene lettere tar til seg fuktighet når pakken blir åpnet. Tørket trevirke som blir utsatt for fuktighetssvingninger vil ofte vri seg og skape spenninger i treverket som kan utløse mange problemer. En grunning sin viktigste funksjon er å redusere fuktopptak og dermed redusere spenningsproblemer. Den andre viktige funksjonen til en grunning er å hindre dannelse av sopp og råte. Dette oppstår gjerne på steder som har dårlig lufting, som f. eks. i laftesporene.

Når huset er ferdig montert, må det ferdige huset behandles med et værbestandig malingsstrøk utvendig som beskytter treverket mot fuktighet og UV-stråler. Innvendig må huset etterbehandlet i henhold til bruksmønster.

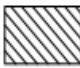

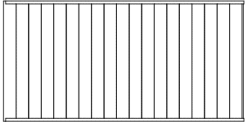

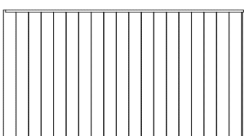

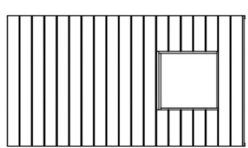

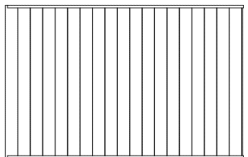

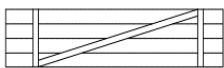

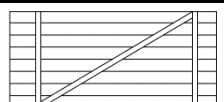

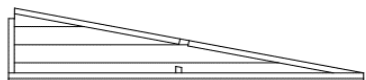

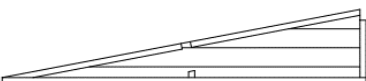

Bruk malerredskaper og maling av høy kvalitet når du maler huset. Følg anvisningene på malerspannet og malingsprodusentens sikkerhets- og bruksanvisninger. Du må aldri male en overflate i sterkt sollys eller i regnvær. Forhør deg hos en malerspesialist når det gjelder hvilken maling som egner seg for ubehandlet myktre, og følg anvisningene fra produsenten.

Dersom huset er blitt malt på riktig måte, vil husets levetid forlenges betraktelig. Vi anbefaler at du inspiserer huset grundig hvert halvår.
