YDEEVNEDEKLARATION

DoP 0238

til fischer injektionsmørtel FIS V Zero (Flydende fastgørelse til brug i beton) DA

1. Varetypens unikke identifikationskode: **DoP 0238**

2. Anvendelsesformål: **Eftermonteret befæstelse i revnet eller ikke-revnet beton, se appendiks, specifikt Bilage B1 - B10.**

3. Fabrikant: **fischerwerke GmbH & Co. KG, Otto-Hahn-Straße 15, 79211 Denzlingen, Tyskland**

4. Bemyndiget repræsentant: **–**

5. System(er) til vurdering og kontrol af konstansen af ydeevnen: **1**

6. Europæisk vurderingsdokument: **EAD 330499-01-0601, Edition 04/2020**
   Europæisk Teknisk Vurdering **ETA-20/0572; 2021-04-28**
   Teknisk vurderingsorgan: **DIBt- Deutsches Institut für Bautechnik**
   Notificeret organ(er) **2873 TU Darmstadt**

7. Deklareret ydeevne(r):

Mekanisk modstand og stabilitet (BWR 1)

Karakteristisk modstand for træklast (statisk og quasi-statisk belastning):

Modstand overfor stålsvig: Bilag C1 - C3	E_S= 210 000 MPa
Modstand overfor kombineret udtræk og beton-kegle brud: Bilag C4 - C7	$\tau_{Rk,100}$= NPD
Modstand overfor svigt af beton-kegle: Bilag C4	
Kantafstand til forhindring af flækning under belastning: Bilag C4	
Robusthed: Bilag C4 - C7	
Maksimal kærv ved montering: Bilag B3, B4, B6	
Min. kant og indbyrdes afstand: Bilag B3 - B6	

Karakteristisk modstand for tværlast (statisk og quasi-statisk belastning):

- Modstand overfor stålsvigt: Bilag C1 - C3
- Modstand overfor svigt ved udtrækning: Bilag C4
- Modstand overfor svigt af betonkant: Bilag C4

Karakteristisk modstand og Forskydninger for seismiske ydelseskategorier C1 og C2:

- Modstand overfor spændingslast, forskydninger, kategori C1: NPD
- Modstand overfor spændingslast, forskydninger, kategori C2: NPD
- Modstand overfor tværlast, forskydninger, kategori C1: NPD
- Modstand overfor tværlast, forskydninger, kategori C2: NPD
- Faktor ringhul: NPD

Forskydninger under kortvarig og langvarig belastning:

- Forskydninger under kortvarig og langvarig belastning: Bilag C8, C9

Hygiene, sundhed og miljø (BWR 3)

- Indhold, emission og / eller udledning af farlige stoffer: NPD

8. Relevant teknisk dokumentation og/eller specifik teknisk dokumentation: **–**

Ydeevnen for den vare, der er anført ovenfor, er i overensstemmelse med den deklarerede ydeevne. Denne ydeevnedeklaration er udarbejdet i overensstemmelse med forordning (EU) nr. 305/2011 på eneansvar af den fabrikant, der er anført ovenfor.

Underskrevet for fabrikanten og på dennes vegne af:

Dr. Oliver Geibig, Administrerende direktør Forretningsenheder og ingeniørarbejde

Jürgen Grün, Administrerende direktør Kemi & Kvalitet

Tumlingen, 2021-05-12

Denne DoP er tilgængelig i forskellige sprogversioner. I tilfælde af fortolkningsmæssig uoverensstemmelse, henvises der til den engelske version, som altid er gældende.

Appendikset indeholder frivillige og udvidede informationer på engelsk. Disse overgår de lokale (sprogneutrale) retslige krav.

Specific Part

1 Technical description of the product

The fischer injection system FIS V Zero is a bonded fastener consisting of an injection cartridge with injection mortar FIS V Zero and a steel element according to Annex A.

The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and concrete.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading)	See Annex C 1 to C 7, B 3 to B 6
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C 1 to C 4
Displacements under short-term and long-term loading	See Annex C 8 to C 9
Characteristic resistance and displacements for seismic performance categories C1 and C2	No performance assessed

3.2 Hygiene, health and the environment (BWR 3)

Essential characteristic	Performance
Content, emission and/or release of dangerous substances	No performance assessed

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with the European Assessment Document EAD 330499-01-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

Installation conditions part 1

fischer anchor rod

		Temperature range III	-40 °C to +120 °C		(max. short term temperature +120 °C; max. long term temperature +72 °C)					

[1] No performance assessed
[2] No performance assessed for installation with hollow drill bit in cracked concrete or water filled hole

Specifications of intended use (part 2)

Base materials:

- Compacted reinforced or unreinforced normal weight concrete without fibres of strength classes C20/25 to C50/60 according to EN 206:2013+A1:2016

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions
  (zinc plated steel, stainless steel or high corrosion resistant steel).
- For all other conditions according to EN 1993-1-4:2015 corresponding to corrosion resistance classes to Annex A 6 table A6.1.

Design:

- Anchorages have to be designed by a responsible engineer with experience of concrete anchor design.
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e. g. position of the anchor relative to reinforcement or to supports, etc.).
- Anchorages are designed in accordance with:
  EN 1992-4:2018 and EOTA Technical Report TR 055, Edition February 2018.

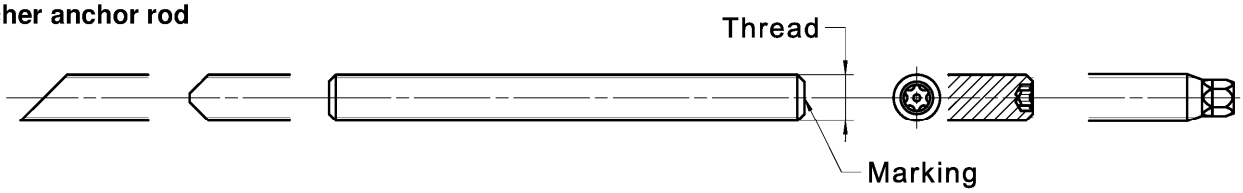
Installation:

- Anchor installation is to be carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- In case of aborted hole: The hole shall be filled with mortar
- Anchorage depth should be marked and adhered to installation
- Overhead installation is allowed (necessary equipment see installation instruction)

Table B3.1: Installation parameters for **anchor rods**

Anchor rods			**Thread**	**M8**	**M10**	**M12**	**M16**	**M20**	**M24**
Width across flats		SW		13	17	19	24	30	36
Nominal drill hole diameter		d_0		10	12	14	18	22	28
Drill hole depth		h_0		$h_0 = h_{ef}$					
Effective embedment depth		$h_{ef,\,min}$		60	60	70	80	90	96
		$h_{ef,\,max}$		160	200	240	320	400	480
Minimum spacing and minimum edge distance		s_{min} = c_{min}	[mm]	40	45	55	65	85	105
Diameter of the clearance hole of the fixture	pre-positioned installation	d_f		9	12	14	18	22	26
	push through installation	d_f		12	14	16	20	24	30
Minimum thickness of concrete member		h_{min}		h_{ef} + 30 (≥100)			h_{ef} + 2d_0		
Maximum installation torque		max T_{inst}	[Nm]	10	20	40	60	120	150

fischer anchor rod



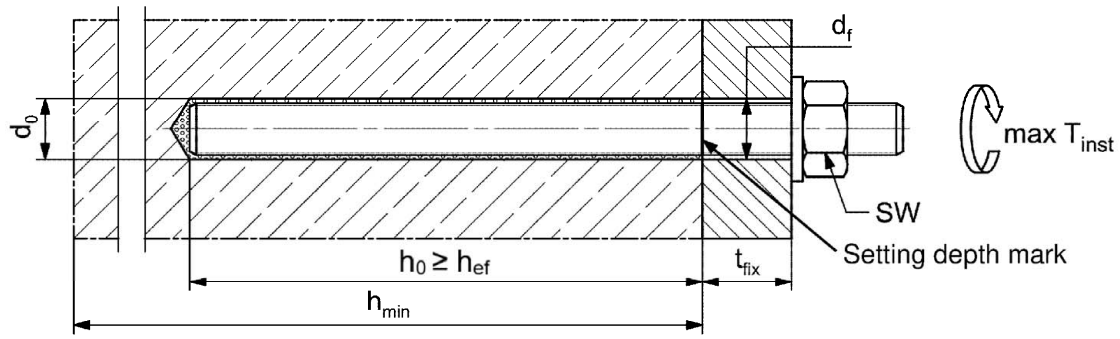
Marking (on random place) fischer anchor rod:

Steel zinc plated PC[1] 8.8	• or +	Steel hot-dip PC[1] 8.8	•
High corrosion resistant steel HCR PC[1] 50	•	High corrosion resistant steel HCR PC[1] 70	-
High corrosion resistant steel HCR PC[1] 80	(	Stainless steel R property class 50	~
Stainless steel R property class 80	*		

Alternatively: Colour coding according to DIN 976-1: 2016

[1] PC = property class

Installation conditions:



Commercial standard threaded rods, washers and hexagon nuts may also be used, if the following requirements are fulfilled:

- Materials, dimensions and mechanical properties according to Annex A 6, Table A6.1
- Inspection certificate 3.1 according to EN 10204:2004, the documents have to be stored
- Setting depth is marked

Figures not to scale

Table B4.1: Installation parameters for **fischer internal threaded anchors RG M I**

Internal threaded anchors RG M I		**Thread**	**M8**	**M10**	**M12**	**M16**
Diameter of anchor	$d_{nom} = d_H$		12	16	18	22
Nominal drill hole diameter	d_0		14	18	20	24
Drill hole depth	h_0		$h_0 = h_{ef} = L_H$			
Effective embedment depth ($h_{ef} = L_H$)	h_{ef}		90	90	125	160
Minimum spacing and minimum edge distance	s_{min} = c_{min}	[mm]	55	65	75	95

Appendix 11 / 26

Table B5.1: Installation parameters for **reinforcing bars**

Nominal diameter of the bar		**ϕ**	**8[1)]**	**10[1)]**	**12[1)]**	**14**	**16**	**20**	**22**	**24**	**25**
Nominal drill hole diameter	d_0	[mm]	10 | 12	12 | 14	14 | 16	18	20	25	28	30	30
Drill hole depth	h_0		$h_0 = h_{ef}$								
Effective embedment depth	$h_{ef,min}$		60	60	70	75	80	90	94	98	100
	$h_{ef,max}$		160	200	240	280	320	400	440	480	500
Minimum spacing and minimum edge distance	s_{min} = c_{min}		40	45	55	60	65	85	95	105	110
Minimum thickness of concrete member	h_{min}		h_{ef} + 30 (≥ 100)			h_{ef} + $2d_0$					

[1)] Both drill hole diameters can be used

Reinforcing bar

- The minimum value of related rib area $f_{R,min}$ must fulfil the requirements of EN 1992-1-1:2004+AC:2010
- The rib height must be within the range: $0{,}05 \cdot \phi \le h_{rib} \le 0{,}07 \cdot \phi$
  (ϕ = Nominal diameter of the bar, h_{rib} = rib height)

Table B7.3 **Maximum processing** time of the mortar and **minimum curing** time (During the curing time of the mortar the concrete temperature may not fall below the listed minimum temperature)

Temperature at anchoring base [°C]	Maximum processing time t_{work}	Minimum curing time [1] t_{cure}
	FIS V Zero	FIS V Zero
-10 to -5 [2]	6 h	72 h
> -5 to 0 [2]	2 h	24 h
> 0 to 5 [2]	45 min	12 h
> 5 to 10	20 min	6 h
> 10 to 15	8 min	3 h
> 15 to 20	5 min	2 h
> 20 to 25	3 min	1 h
> 25 to 30	2 min	45 min
> 30 to 40	1 min	30 min

[1] In wet concrete or water filled holes the curing times must be doubled
[2] Minimum cartridge temperature +5°C

Installation instructions part 1

Drilling and cleaning the hole (hammer drilling with standard drill bit)

1		Drill the hole. Nominal drill hole diameter $\mathbf{d_0}$ and drill hole depth $\mathbf{h_0}$ see **tables B3.1, B4.1, B5.1, B6.1**		
2		Clean the drill hole: For $h_{ef} \leq 12d$ and $d_0 < 18$ mm blow out the hole twice by hand		For $h_{ef} > 12d$ and / or $d_0 \geq 18$ mm blow out the hole twice with oil-free compressed air ($p \geq 6$ bar)
3		Brush the drill hole twice. For drill hole diameter $d_0 \geq 18$ mm and / or $h_{ef} > 12d$ use a power drill. For deep holes use an extension. Corresponding brushes see **table B7.1**		
4		Clean the drill hole: For $h_{ef} \leq 12d$ and $d_0 < 18$ mm blow out the hole twice by hand		For $h_{ef} > 12d$ and / or $d_0 \geq 18$ mm blow out the hole twice with oil-free compressed air ($p \geq 6$ bar)

Go to step 5

Drilling and cleaning the hole (hammer drilling with hollow drill bit)

1		Check a suitable hollow drill (see **table B1.1**) for correct operation of the dust extraction
2		Use a suitable dust extraction system, e.g. fischer FVC 35 M or a comparable dust extraction system with equivalent performance data Drill the hole with hollow drill bit. The dust extraction system has to extract the drill dust nonstop during the drilling process and must be adjusted to maximum power. Nominal drill hole diameter $\mathbf{d_0}$ and drill hole depth $\mathbf{h_0}$ see **tables B3.1, B4.1, B5.1, B6.1**

Go to step 5

Installation instructions part 2

Preparing the cartridge

5		Remove the sealing cap Screw on the static mixer (the spiral in the static mixer must be clearly visible)
6	 	Place the cartridge into the dispenser
7	 	Extrude approximately 10 cm of material out until the resin is evenly grey in colour. Do not use mortar that is not uniformly grey

Go to step 8

Injection of the mortar

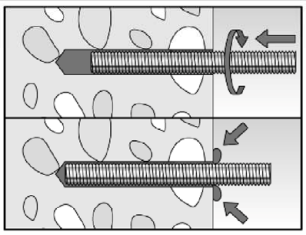
8	 Fill approximately 2/3 of the drill hole with mortar. Always begin from the bottom of the hole and avoid bubbles	 The conditions for mortar injection without extension tube can be found in **table B7.2** For deeper drill holes, than those mentioned in **table B7.2,** use a suitable extension tube	 For overhead installation, deep holes (h_0 > 250 mm) or drill hole diameter (d_0 = 30 mm) use an injection adapter

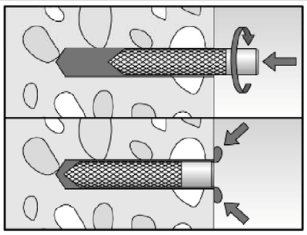
Go to step 9

Installation instructions part 3

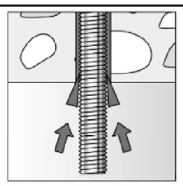
Installation of anchor rods or fischer internal threaded anchors RG M I

9

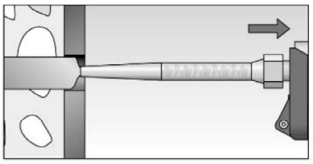




Only use clean and oil-free metal parts.
Mark the setting depth of the metal part. Push the anchor rod or fischer internal threaded RG M I anchor down to the bottom of the hole, turning it slightly while doing so.
After inserting the metal parts, excess mortar must be emerged around the anchor element.



For overhead installations support the metal part with wedges (e.g. fischer centering wedges) or fischer overhead clips.

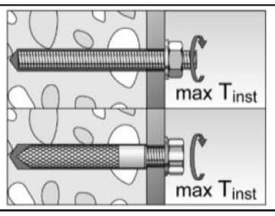


For push through installation fill the annular gap with mortar

10

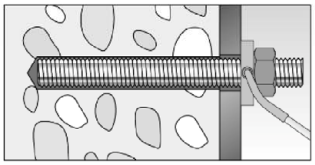
Wait for the specified curing time t_{cure}
see **table B7.3**

11



Mounting the fixture
max T_{inst} see **tables B3.1 and B4.1**

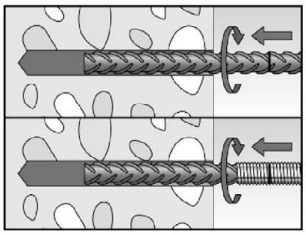
Option



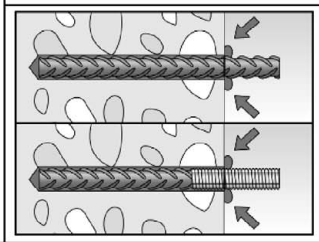
After the minimum curing time is reached, the gap between metal part and fixture (annular clearance) may be filled with mortar via the fischer filling disc.
Compressive strength ≥ 50 N/mm² (e.g. fischer injection mortars FIS V Zero, FIS HB, FIS SB, FIS V, FIS V Plus, FIS EM Plus).
ATTENTION: Using fischer filling disc reduces t_{fix} (usable length of the anchor)

Installation reinforcing bars and fischer rebar anchor FRA

9

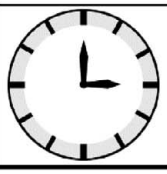


Only use clean and oil-free reinforcing bars or fischer rebar anchor FRA. Mark the setting depth. Push the reinforcement bar or the fischer rebar anchor FRA into the filled hole up to the setting depth mark.
Recommendation:
Rotation back and forth of the reinforcement bar or the fischer rebar anchor FRA makes pushing easy



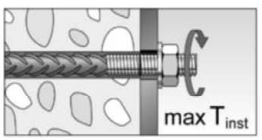
When the setting depth mark is reached, excess mortar must be emerged from the mouth of the drill hole.

10



Wait for the specified curing time t_{cure} see **table B7.3**

11



Mounting the fixture
max T_{inst}
see **table B6.1**

Table C1.1: Characteristic values **for steel failure** under **tension / shear load** of **fischer anchor rods** and **standard threaded rods**

[2)] Calculation of effective displacement:

$\delta_{V0} = \delta_{V0\text{-Factor}} \cdot V_{Ed}$

$\delta_{V\infty} = \delta_{V\infty\text{-Factor}} \cdot V_{Ed}$

(V_{Ed}: Design value of the applied shear force)
