## 1 INTRODUCTION

### 1.1 Order

By order of J.S. Cock A/S in Oslo, Norway, the Centrum voor Onderzoek en Technisch advies (COT bv) in Haarlem, The Netherlands, has tested the system consisting of 3 layers Power Coat "3 in 1" according to Norsok M-501, Edition 6, System 1.

### 1.2 General information

| COT sample number | Sample              | Colour       | Batch number  | Received        |
|-------------------|---------------------|--------------|---------------|-----------------|
| 16-01-13/0018     | Power Coat "3 in 1" | RAL 7035     | 574           | 15 January 2013 |
| 16-01-13/0019     | Power Coat "3 in 1" | RAL 9007 mio | 8304 and 8274 |                 |
| 16-01-13/0020     | Kombi-Verdünnung    | --           | --            |                 |

#### Substrate

Mild carbon steel, dimensions 150 x 75 x 5 mm.

#### Surface preparation

The panels have been abrasive-blasted to a cleanliness degree equivalent to Sa 2½ (ISO 8501-1).

#### System and specified dry film thickness

Power Coat "3 in 1" RAL 7035 : min. 100 µm  
Power Coat "3 in 1" RAL 9007 mio : min. 100 µm  
Power Coat "3 in 1" RAL 7035 : min. 100 µm

#### Application data

The system has been applied to the test panels by COT bv and the data have been reported in Annex 1.

#### Dry film thickness

After curing of the last coating layer the dry film thickness of the coating system has been measured according to ISO 2178 with a magnetic dry film thickness meter (COT E004). On each panel ten measurements have been carried out and the values have been corrected with a correction value of 25 micrometer according to ISO 19840. The minimum, the maximum, the average and the standard deviation have been reported.

## 2 PERFORMANCE TESTS

### 2.1 Ageing test

The fully cured coating system has been scribed horizontal down to the bare metal. The scratch line is 2 mm wide and 50 mm long. The panels have been exposed to the following cycle according to ISO 20340 Annex A:

|          |   |
|----------|---|
| 72 hours | UV-A 340 nm weatherometer in accordance with ISO 11507 Method A (4 hours UV-light at 60 °C / 4 hours condensation at 50 °C) |
| 72 hours | Salt Spray test according to ISO 9227 NSS   |
| 24 hours | Exposure to low temperature (-20 °C)  |

The total exposure time is 4200 hours.

The start of the ageing test was March 29<sup>th</sup>, 2013.

The end of the ageing test was September 20<sup>th</sup>, 2013.

### 2.2 Adhesion test

The adhesion before and after the ageing test has been determined by a pneumatic adhesion tester in accordance with ISO 4624. The coating surface and the dolly (diameter 20 mm) have been sanded lightly and the epoxy adhesive has been applied. After curing of the adhesive and prior to testing, the coating and the adhesive have been drilled around the dolly down to the bare metal. Three trials on the unexposed panel and two trials on each of the tested panels have been performed and the average has been reported.

The adhesion of the coating system has been determined begin October 2013.

### 2.3 Overcoatable without mechanical treatment

After the ageing test the exposed panels have been over coated with Power Coat "3 in 1" RAL 7035 without mechanical treatment. After 7 days the adhesion has been determined according to ISO 4624.

The adhesion of the topcoat has been determined begin October 2013.

## 3 REQUIREMENTS

### 3.1 Ageing test

After exposure to the specified time, the test panels shall comply with the following requirements:

| Method     |   | Requirements   |
|------------|---|--|
| --         | Corrosion creep from scribe*              | ≤ 8.0 millimetres  |
| ISO 4628-2 | Blistering                                | 0 (S0)   |
| ISO 4628-3 | Rusting                                   | Ri 0   |
| ISO 4628-4 | Cracking                                  | 0 (S0)   |
| ISO 4628-5 | Flaking                                   | 0 (S0)   |
| ISO 4628-6 | Chalking                                  | maximum rating 2   |
| ISO 4624   | Adhesion                                  | minimum 5.0 MPa and maximum 50 % reduction from original value |
| ISO 4624   | Overcoatable without mechanical treatment | minimum 5.0 MPa  |

\* The corrosion creep is calculated from the equation:  $M=(C-W)/2$ , where  
M = corrosion creep (mm)  
C = average of the nine measurements (mm)  
W = the original width of the scribe (mm)

## 4 RESULTS

### 4.1 Original adhesion value

| Test                                      | Panel 5   | Panel 6   |
|---|---|---|
| Minimum – Maximum Dry film thickness (µm) | 342 – 379   | 334 – 391   |
| Dry film thickness (µm)                   | 364 ± 13  | 362 ± 19  |
| Adhesion value (MPa)<br>Place of rupture  | 6.0 ± 0.6<br>20 % in 2 <sup>nd</sup> coat<br>80 % in 3 <sup>rd</sup> coat | 6.8 ± 0.2<br>20 % in 2 <sup>nd</sup> coat<br>80 % in 3 <sup>rd</sup> coat |

### 4.2 Ageing test

Exposure time: 4200 hours

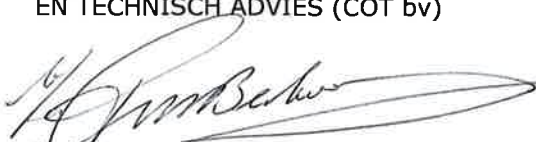

| Method   | Panel 1                     | Panel 3                     | Panel 4   |
|--|-----------------------------|-----------------------------|---|
| Min – Max Dry film thickness (µm)                        | 309 – 351                   | 330 – 350                   | 310 – 352   |
| -- Dry film thickness (µm)                               | 335 ± 13                    | 337 ± 7                     | 332 ± 13  |
| ISO 4628-2 Blistering                                    | 0(S0)                       | 0(S0)                       | 0(S0)   |
| ISO 4628-3 Rusting                                       | Ri 0                        | Ri 0                        | Ri 0  |
| ISO 4628-4 Cracking                                      | 0(S0)                       | 0(S0)                       | 0(S0)   |
| ISO 4628-5 Flaking                                       | 0(S0)                       | 0(S0)                       | 0(S0)   |
| ISO 4628-6 Chalking                                      | 2                           | 2                           | 2   |
| -- Corrosion creep from scribe (mm)                      | 7.8                         | 7.9                         | 7.6   |
| ISO 4624 Adhesion (MPa)<br>Place of rupture              | 5.4 ± 0.8<br>From substrate | 5.6 ± 0.4<br>From substrate | 5.7 ± 0.2<br>From substrate   |
| ISO 4624 Adhesion of overcoat* (MPa)<br>Place of rupture | 6.5 ± 0.1<br>From substrate | 6.3 ± 1.0<br>From substrate | 7.0 ± 2.0<br>75 % from substrate<br>25 % between 3 <sup>rd</sup> and 4 <sup>th</sup> coat |

\* Is the 4<sup>th</sup> layer in the over coated system.

## 5 CONCLUSION

The system consisting of 3 layers Power Coat "3 in 1", dry film thickness 100/100/100 µm, with COT sample numbers 16-01-13/0018 and 0019, meets the requirements of the pre-qualification of Norsok M-501, Edition 6, System 1.
