

Koskisen products for ships

Koskisen Group is a family business operating in the wood products industry and employs about a thousand people. Over the last century the company has evolved into an expert that is committed to wood. The company is a global operator, and its products are exported to over 30 countries. Family-ownership is still manifest in the name Koskisen.

Finnish plywood

Koskisen gets all its raw material through its own wood procurement unit. In the harsh climate conditions of the Nordic forests, birch grows to be hard, tough and homogeneous and makes an excellent material for demanding special plywood products.

All products are coated with a taint and odour free overlay

Especially manufactured for ships

Koskisen solutions for ships combines our tested solution of light weight with high strength and hygiene. Koskisen materials for ships are strictly controlled by international classification agencies to guarantee that only high class quality products are used. Our solutions for ships are certified by Det Norske Veritas (DNV) certificate numbers K-4687 and K-4688 for decks and linings.

Koskisen panel solutions for ships are always coated with a taint and odour free overlay, which makes them an excellent cladding material in fishing vessels or for vessels carrying foodstuffs. The materials used do not corrode metal parts or other fittings. Panels are available with T&G or other machining as may be required.

Examples of use:

- lining material in cargoholds, tank top linings, fishing boat linings
- decking material for cargo car decks, carriage ramps, pedestrian bridges
